*Silca Grate System*

*Province of Quebec*

Use the following Tables to determine deck component sizes. Perform the following steps:

1. Use Table 1 below to determine the required joist size based on the chosen paver thickness and the span (or length "L") of your deck joists – See Figure 1.
2. Determine the maximum support column spacing based on joist length and chosen beam size. Use the appropriate Table based on chosen paver thickness. The Tables are numbered from 3A to 7A for 0.75"(19mm), 1.25"(32mm), 2"(51mm), 2.5"(64mm), and 3"(76mm) pavers, in this order.
3. Determine the required footing type and size using Tables 3B to 7B based on your chosen paver thickness.

Note: For retro-fit applications, where ledgers attached to each face of existing joists are required to support the Silca grate, see Table 2 and Figure 2.
